EXPERIENCE

Oracle | *Software Engineer, AI Platform*

Jun 2025 – Present

- Designed, built, and operated a **distributed executor** routing pipeline nodes to **Docker** or **AWS Lambda** via typed **REST APIs**, backed by an **S3** artifact store, sustaining **sub-200ms p99 latency** at scale.
- Used **Codex** alongside **Claude Code** as **AI-assisted developer tools** to accelerate coding, debugging, and test generation.
- Built a deployment-gated **evaluation framework** with **guardrails** and automated **regression testing**, blocking failed releases before production, with **human-in-the-loop** review.
- Implemented **OAuth-based auth** and **RBAC** for secure **API** access, with **GitHub Actions CI/CD** and production monitoring.

QureAI | *ML Infrastructure Engineer*

Mar 2026 – Present

- Deployed, tested, and served **AI** capabilities and **data services** in production, cutting **p99 latency from 420ms to 140ms** across **50K+ daily requests** on an **async, autoscaled** architecture.
- Built and maintained **Apache Airflow** DAGs orchestrating multi-stage **data pipelines** with dependency management and automated failure alerting.

Nomura Research Institute Financial Technologies | *Software Engineer*

Sep 2019 – Aug 2023

- Architected and operated **25+ production microservices** and **APIs** for **1M+ users** at **99.9% uptime** over 4 years on **AWS (EC2, RDS, SQS)**, with fault-tolerant failure handling.
- Maintained **unit and integration test suites** and monitored production systems, cutting escalations **60%** in one quarter via standardized retry/timeout contracts and **root cause analysis**.

PROJECTS

Watch-your-LLM

github.com/ganeshhgupta/watch-your-llm

- Built a self-hosted **observability** platform that traces requests, **latency**, and cost through a Python SDK decorator, sending traces asynchronously to a **FastAPI** collector on **PostgreSQL**.

LangFetch

tinyurl.com/LangFetch

- Built a **Python/FastAPI** agentic SQL workspace that plans multi-step queries, runs them in sequence, and reads each result before choosing the next.

Distributed KV Store

github.com/ganeshhgupta/Distributed-KV-Store

- Built a distributed KV store simulator with **quorum-based replication**, **write-ahead logging**, and key **partitioning** across a 3-node **leader/follower** cluster.

EDUCATION

University of Texas at Arlington | *M.S. Computer Science, GPA 4.0/4.0*

Aug 2023 – May 2025

MCKV Institute of Engineering | *B.Tech Computer Science*

Aug 2016 – Jul 2020

SKILLS

Languages: Python, Java, TypeScript, SQL, C++

Distributed Systems: Microservices, REST APIs, Fault Tolerance, Scalability, OAuth, RBAC

AI-Assisted Development: Codex, Claude Code, AI-Powered Test Generation & Debugging

Cloud & DevOps: AWS, GCP, Docker, CI/CD (GitHub Actions), Airflow

Fundamentals: Data Structures & Algorithms, Operating Systems, Database Systems, Computer Networks
