EXPERIENCE

Oracle | *Software Engineer, AI Platform*

Jun 2025 – Present

- Designed and built a deployment-gated enforcement system combining rules, heuristics, and ML-based signals to block policy-violating releases, blocking 15% of failed releases before production while minimizing false positives.
- Owned a low-latency, high-throughput production service end-to-end, architecture through on-call, handling millions of daily transactions at 99%+ uptime with strict reliability and correctness requirements.
- Engineered a pluggable distributed executor routing workloads across Docker and AWS Lambda with an S3 artifact store, building resilient infrastructure under adversarial, scale-sensitive failure conditions.
- Partnered closely with model teams to integrate ML-based signals into production decision systems without owning model training, selecting and tuning which signals teams standardize on across multiple LLMs.

QureAI | *ML Infrastructure Engineer*

Mar 2026 – Present

- Built a model observability and governance framework detecting drift, latency, and quality regressions in production, creating explainable, auditable signals that gate rollback decisions.
- Cut p99 serving latency 420ms to 140ms across 50K+ daily requests through systems-level performance analysis and an async, fault-tolerant serving redesign.

Nomura Research Institute Financial Technologies | *Software Engineer*

Sep 2019 – Aug 2023

- Built and operated 25+ production microservices in Java, C++, and SQL-backed distributed systems for 1M+ users in a high-security financial environment, sustaining 99.9% uptime over 3 years on AWS.
- Standardized failure-handling contracts across 25+ financial services, reducing production escalations 60% in one quarter via consistent retry, timeout, and propagation semantics under strict correctness requirements.

PROJECTS

Watch-your-LLM

github.com/ganeshhgupta/watch-your-llm

- Production eval and observability platform with hallucination detection, drift tracking, and regression alerting, built to catch and explain policy-violating outputs across model versions.

RootCause AI

github.com/ganeshhgupta/rootcause-ai

- Multi-agent system automating production incident diagnosis via tool-use chains, synthesizing evidence-backed, explainable reports for faster investigation and response.

Distributed KV Store / VPC Control Plane Simulator

github.com/ganeshhgupta/distributed-kv-store

- Raft-consensus distributed storage engine handling concurrent writes with linearizable reads and log compaction; companion VPC control plane simulator modeling security group enforcement.

EDUCATION

University of Texas at Arlington | *M.S. Computer Science, GPA 4.0/4.0*

Aug 2023 – May 2025

MCKV Institute of Engineering | *B.Tech Computer Science*

Jul 2016 – Jul 2020

SKILLS

Languages: Python, Java, C++, TypeScript, SQL

Distributed Systems: Low-Latency Services, Fault Tolerance, Consensus Protocols, Scale-Sensitive Infrastructure

Risk & Decisioning Systems: Rules/Heuristics/ML-Signal Fusion, Enforcement Infrastructure, Explainability, Auditability, False-Positive Management

ML-Adjacent Infra: Model Observability, Evaluation Frameworks, Guardrails, Governance

Cloud & DevOps: AWS, GCP, Docker, Kubernetes, CI/CD, PostgreSQL

CERTIFICATIONS

AWS Certified Developer Associate | Google Cloud Professional Machine Learning Engineer
