EXPERIENCE

Oracle | *Software Engineer, AI Platform*

Jun 2025 – Present

- Owned features **end-to-end** across the full SDLC, from design through deployment and operations, shipping a **distributed executor** via typed **REST APIs** at **sub-200ms p99 latency**.
- Implemented **OAuth**-based auth and **RBAC** on **AWS** serverless infrastructure (**Lambda, S3, DynamoDB, API Gateway**), securing multi-tenant access to internal platform services.
- Wrote fault-tolerant **Go/Rust** scheduling and resource-allocation logic for a multi-cloud **GPU/HPC fleet**, maintaining utilization through node loss and provider instability.
- Participated in **design reviews** and **code reviews**; used **AI coding assistants** across the SDLC, validating generated code against correctness and operational bars.

QureAI | *ML Infrastructure Engineer*

Mar 2026 – Present

- Rebuilt a synchronous service into an **async, autoscaled** architecture on **GCP Cloud Run**, cutting **p99 latency from 420ms to 140ms** across **50K+ daily requests**.
- Troubleshoot and resolved **production incidents** end-to-end on an **on-call rotation**, driving **root cause analysis** and operational improvements with automated **CI/CD rollback** and failure alerting.

Nomura Research Institute Financial Technologies | *Software Engineer*

Sep 2019 – Aug 2023

- Architected and operated **25+ production Java microservices** for **1M+ users** at **99.9% uptime** over 4 years on **AWS (EC2, RDS, SQS)**, owning **system design** end-to-end.
- Standardized **retry, timeout, and failure-propagation** contracts across 25+ services, cutting production escalations **60%** in one quarter via **root cause analysis** and post-incident reviews.
- Led **architecture and code-review** sessions across production services, mentoring engineers on **Object-Oriented Design**, system design, and reliability.
- Cut a nightly SQL aggregation pipeline (billing-adjacent settlement data) from **8 minutes to 90 seconds** via **indexed views** and batch partitioning.

PROJECTS

Distributed KV Store

github.com/ganeshhgupta/Distributed-KV-Store

- Built a replicated key-value store in **Go** implementing **Raft consensus**, **linearizable reads**, and **log compaction**, tolerating node failures without data loss.

Watch-your-LLM

github.com/ganeshhgupta/watch-your-llm

- Built a self-hosted **observability** platform tracing requests, **latency**, and cost through a **FastAPI** collector and **PostgreSQL** store, with a **React** dashboard.

VPC Control Plane Simulator

github.com/ganeshhgupta/vpc-control-plane-sim

- Built an AWS-style **VPC** networking simulator with **CIDR** validation, **security-group** evaluation, and configuration **drift detection**.

EDUCATION

University of Texas at Arlington | *M.S. Computer Science, GPA 4.0/4.0*

Aug 2023 – May 2025

MCKV Institute of Engineering | *B.Tech Computer Science*

Aug 2016 – Jul 2020

SKILLS

Languages: Java, Go, Python, Rust, C++, SQL

Distributed Systems: Object-Oriented Design, Fault-Tolerant Placement, Multi-Tenant Isolation, Raft Consensus

Cloud & Infra: AWS (Lambda, S3, DynamoDB, API Gateway, EC2, RDS, SQS), GCP, Docker, CI/CD

Engineering: Design Reviews, Code Review, On-Call, Root Cause Analysis, Mentoring, AI-Assisted Development

Certifications: AWS Certified Developer Associate, GCP Professional MLOps Engineer
