Experience

Oracle

Jun 2025 – Present

Software Engineer, AI Platform

- Write and maintain Python automation and evaluation scripts that analyze system behavior in production, flagging inconsistencies and performance regressions before release.
- Debug and reproduce complex production issues across distributed services, tracing root cause through logs and traces to close 15% of failure-prone releases before they ship.
- Apply AI-assisted development tools (Claude Code, Codex) to accelerate debugging and test-script authoring, improving analysis turnaround on recurring production issues.
- Built observability tooling replacing manual polling with event-driven monitoring scripts, cutting redundant checks 90% and enabling real-time detection of system inconsistencies.
- Collaborate with platform and infrastructure teams to isolate and resolve system-level issues, documenting findings and driving fixes through to production.

QureAI (AI Startup)

Mar 2026 – Present

ML Infrastructure Engineer

- Built a model observability framework tracking drift, latency, and evaluation regressions in production, enabling governance-aligned rollback workflows as an early engineer at this AI startup.
- Improved RAG retrieval recall 61% to 89% on a 2K-query eval set by rebuilding the chunking pipeline with hybrid dense-sparse retrieval and re-ranking.

Nomura Research Institute Financial Technologies

Sep 2019 – Aug 2023

Software Engineer

- Architected and operated 25+ production C++ and SQL-backed microservices in distributed systems for 1M+ users, sustaining 99.9% uptime over 4 years on AWS (EC2, RDS, SQS).
- Optimized SQL schema design and query performance, cutting nightly data aggregation from 8 minutes to 90 seconds via indexed views and batch partitioning.
- Standardized failure-handling contracts (retry, timeout, propagation semantics) across 25+ services, reducing production escalations 60% in one quarter.
- Wrote automated test suites and debugging tooling to validate service behavior pre-release, catching regressions across 25+ services before customer impact.

Projects

LangFetch | tinyurl.com/LangFetch

- LangGraph agent compiling natural-language questions into dependency-ordered SQL subqueries with Pinecone vector retrieval and hybrid re-ranking; deployed as an MCP-compatible server for enterprise data queries.

RootCause AI | github.com/ganeshhgupta/rootcause-ai

- Multi-agent system diagnosing production incidents via tool-use chains; routes alerts to specialized sub-agents and synthesizes evidence-backed root cause reports, reducing mean time to resolution.

Watch-your-LLM | github.com/ganeshhgupta/watch-your-llm

- Production LLM eval platform with hallucination detection, drift tracking, rubric-based scoring, and regression alerting across model versions; FastAPI backend, PostgreSQL.

Education

University of Texas at Arlington

Aug 2023 – May 2025

MS, Computer Science, GPA 4.0/4.0

MCKV Institute of Engineering

Jul 2016 – Jul 2020

BTech, Computer Science

Skills

Languages: Python, Java, C++, TypeScript, SQL

Testing & Debugging: Automated Testing, Root Cause Analysis, Log/Trace Analysis, AI-Assisted Dev Tools (Claude Code, Codex)

Backend & APIs: RESTful APIs, Distributed Systems, Microservices, Event-Driven Architecture

Cloud & DevOps: AWS (Lambda, EC2, RDS, SQS), Kubernetes, Docker, Git, CI/CD

Certifications

AWS Certified Developer Associate | GCP Professional MLOps Engineer
