Experience

Oracle | *Software Engineer, AI Platform* Jun 2025 – Present

- Built a **distributed executor** in **Java** and **Python** exposing typed **REST APIs** over Docker and **AWS Lambda**, secured with **OAuth** and **RBAC**, holding **sub-200ms p99** across millions of daily transactions.
- Led a production **multi-agent AI system** on **OpenAI Agents SDK**, **LangGraph**, and **MCP** tool use, with **guardrails** and policy controls on what agents can act on.
- Built **evaluation harnesses** scoring LLM output quality, **safety**, and hallucination rates across agent versions, **blocking releases** that fail regression suites.
- Wrote **fault-tolerant** scheduling and placement logic for multi-cloud compute clusters, keeping workloads running through **node failures**, with **Prometheus/Grafana** observability.

QureAI | *AI Engineer* Mar 2026 – Present

- Built an **SRE incident agent** that investigates production alerts, finds root causes, and escalates data questions to a SQL agent over **A2A**.
- Built agent workflows with **AWS Bedrock Guardrails** content-safety controls, and **CI/CD** with quality gates and **automated rollback**.
- Cut **p99 latency from 420ms to 140ms** across **50K+ daily requests** by moving synchronous services to **async processing** with autoscaling.

Nomura Research Institute Financial Technologies | *Software Engineer* Sep 2019 – Aug 2023

- Architected **25+ Java Spring Boot microservices** for financial transaction processing, sustaining **99.9% uptime with zero data loss** for **1M+ users** on **AWS**.
- Cut production escalations **60%** in one quarter by standardizing retry, timeout, and **OAuth-aligned authentication** contracts across **25+ services**, driving root cause analysis.
- Raised throughput **2.4x** by **profiling** and optimizing batching, scheduling, and concurrency in **C++** and Python inference services.
- Led **architecture and code reviews** and mentored engineers on system design, reliability, and **secure API practices**.

Projects

RootCause AI `github.com/ganeshhgupta/rootcause-ai`

- **LangGraph** multi-agent system that triages production alerts, routes each to a specialized sub-agent with guardrailed **tool use**, and writes a structured **root-cause brief**.

Distributed NoSQL Database `github.com/ganeshhgupta/distributed-kv-store`

- **Fault-tolerant** distributed database that confirms writes only after a **majority of nodes** store them, recovers crashed nodes from a **write-ahead log**, and resyncs replicas via **leader-follower replication**.

Watch-your-LLM `github.com/ganeshhgupta/watch-your-llm`

- **LLM observability** platform that traces model calls, latency, and token usage, with a **FastAPI** backend and **React/TypeScript** dashboard.

Education

University of Texas at Arlington | *M.S. Computer Science, GPA 4.0/4.0* Aug 2023 – May 2025

MCKV Institute of Engineering | *B.Tech Computer Science* Aug 2016 – Jul 2020

Skills

Languages: Java, C++, Python, SQL, TypeScript

Backend and Distributed Systems: Spring Boot, REST APIs, Microservices, Concurrency, Fault Tolerance, Replication

Security and AI: OAuth, RBAC, Guardrails, Bedrock Guardrails, LLM Evals, OpenAI Agents SDK, LangGraph, MCP

AWS and Tooling: Lambda, S3, EC2, RDS, SQS, DynamoDB, Docker, Kubernetes, CI/CD, Prometheus, Grafana

Certifications: AWS Certified Developer Associate, GCP Professional MLOps Engineer
