Experience

Oracle | *Software Engineer, AI Platform* Jun 2025 – Present

- Built the **evaluation harnesses** that decide whether agent releases ship, defining "better" for open-ended outputs via **rubric-based scoring** of quality, safety, **hallucination**, and grounding, gated by **regression suites**.
- Ran **A/B tests** to validate model and product changes before full rollout, pairing online results with the **offline eval** gate.
- Led a production **multi-agent system** on **OpenAI Agents SDK**, **LangGraph**, and **MCP** handling **millions of daily transactions** at **99%+ uptime**, across GPT, Claude, Llama, and Gemini.
- Built a shared **distributed executor** platform exposing typed **REST APIs** over Docker and serverless compute with an **S3** artifact store at **sub-200ms p99**, plus **Prometheus/Grafana** observability for **vLLM** serving.

QureAI | *AI Engineer* Mar 2026 – Present

- Raised **top-3 retrieval recall from 61% to 89%** on a **2K-query eval set** by rebuilding the pipeline with **hybrid dense-sparse retrieval** and **re-ranking**.
- Built **Langfuse** tracing and **eval pipelines** on production agents; fine-tuned **PyTorch** models on **multi-GPU** clusters.
- Cut **p99 latency from 420ms to 140ms** across **50K+ daily requests** by moving LLM serving to an **async, autoscaled** architecture.

Nomura Research Institute Financial Technologies | *Software Engineer* Sep 2019 – Aug 2023

- Cut model-related production regressions **28%** and validation time from **6 hours to 90 minutes** by building an automated **model-evaluation and deployment-gating framework** covering quality, latency, robustness, and regression checks.
- Improved computer-vision model accuracy **9.6 points** and cut false negatives **31%** by systematically evaluating **CNN, ResNet, UNet, and ViT** architectures and tuning decision thresholds.
- Architected and operated **25+ Python and Java services** for **1M+ users** at **99.9% uptime**, cutting escalations **60%** by standardizing API contracts and failure handling.
- Cut nightly aggregation from **8 minutes to 90 seconds** by optimizing **SQL and PL/SQL** with indexed views and partitioning, and led **architecture and code reviews**.

Projects

Watch-your-LLM `github.com/ganeshhgupta/watch-your-llm`

- **LLM evaluation** platform with **rubric-based scoring**, hallucination detection, and **regression alerting** across model versions, with a FastAPI backend.

RootCause AI `github.com/ganeshhgupta/rootcause-ai`

- **LangGraph** multi-agent system that triages production alerts, routes each to a specialized sub-agent with guardrailed **tool use**, and writes a structured **root-cause brief**.

Distributed NoSQL Database `github.com/ganeshhgupta/distributed-kv-store`

- **Fault-tolerant** database that confirms writes only after a **majority of nodes** store them, recovers crashed nodes from a **write-ahead log**, and resyncs replicas via **leader-follower replication**.

Education

University of Texas at Arlington | *M.S. Computer Science, GPA 4.0/4.0* Aug 2023 – May 2025

MCKV Institute of Engineering | *B.Tech Computer Science* Aug 2016 – Jul 2020

Skills

Languages: Python, C++, Go, Rust, TypeScript, SQL

Agent Evaluation: LLM and Agent Evals, Failure Analysis, Hallucination and Grounding Metrics, Regression Suites, LLM-as-Judge, Langfuse

AI Agents: Multi-Agent Systems, LangGraph, OpenAI Agents SDK, MCP, Tool Calling, GPT, Claude, Llama, Gemini

Systems: Distributed Evaluation Pipelines, GPU Clusters, PyTorch, Docker, Kubernetes, CI/CD

Certifications: AWS Certified Developer Associate, GCP Professional MLOps Engineer
